

WRITER PERMISSION FOR VISITORS

Typically, our “visitors” are students and we want them to post stuff. For this, visitors need the “Writer” permission, otherwise, students can only comment on your posts.

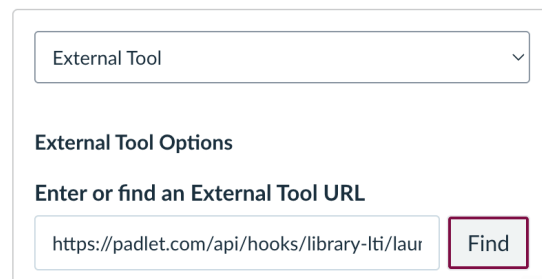

Share > Collaborators > Visitor permissions

CONNECT TO CANVAS WITH EXTERNAL TOOL

The **External Tool** option in Canvas Assignments or Modules is the easiest way to reliably share a Padlet with students.

Copy/pasting links or embed codes might allow posting under pseudonyms, prompt extra logins and/or broadcast student work to the public.

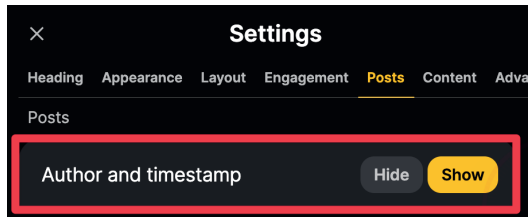

A screenshot of the 'External Tool' integration form in Canvas. It shows a dropdown menu for 'External Tool', a section for 'External Tool Options', and a field for 'Enter or find an External Tool URL' with the URL 'https://padlet.com/api/hooks/library-lti/laur' and a 'Find' button.

SHOW AUTHOR & TIMESTAMP

See who is posting what.

Settings > Posts > Author and timestamp

PADLET SETTINGS

GRADEBOOK VIEW

Padlet's Gradebook makes it much easier to sort through students' work. It isolates posts by student so you can efficiently assign points in Canvas.

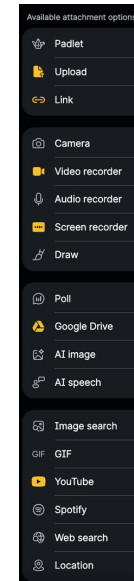

You can also send grades from Padlet to Canvas, but it's point system is not as sophisticated as most higher ed professors are wanting.

It's the alternative view that's really helpful.

... Three Dots > Gradebook

TOGGLE CONTENT TYPES

Padlet allows students to post a variety of multimedia types and you can turn them on or off to suit your assignment.

Posts

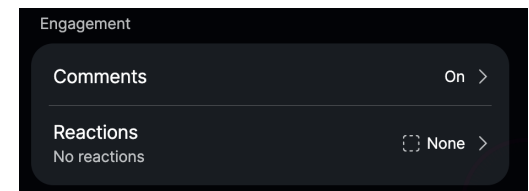

Settings > Posts > Post Fields > Attachment

Here you can toggle the different content types. Some allow you to customize them further. For instance, the **Video recorder** will let you limit the video length.

Comments & Likes

Settings > Engagement > Comments (Click on “Comments” to expand the menu)

You might also enable/disable “likes” in **Reactions**.

NO MODERATION

Padlet's automatic filter errs on the side of caution for its K-12 users, so it might red flag your whole discussion if it covers an adult topic.
